Education

VIT Bhopal University

B.Tech Computer Science Engineering

CGPA: 7.97

Bhopal, Madhya Pradesh

2022–2026

New Horizon Scholars' School

Senior Secondary (Class 12), CBSE

Percentage: 62.2%

Thane, Maharashtra

2020–2022

Ramakrishna Mission Vidyapith

Secondary (Class 10), CBSE

Percentage: 92.2%

Deoghar, Jharkhand

2015–2020

Projects

Password Protection using Hashing and Salting:

The objective was to improve the security of user authentication for enterprise applications. The system collected user passwords, applied a custom salt and used **SHA-256** and **MD5** algorithms to hash them before storing them in a secure relational database. These securely hashed passwords were then stored using **SQL** in a relational database. I was responsible for developing the backend architecture and ensuring robust database interactions.

Medical Emergency Website:

Designed to securely store critical medical data for patients, enabling hospitals to access essential information instantly during emergencies. This reduced treatment delays by eliminating the need for manual data entry. I handled back-end development using **MongoDB**, ensuring secure storage and real-time availability of user data.

TerraTech–Price and Yield Prediction Model:

Utilized machine learning to forecast future crop prices based on historical agricultural datasets. I managed back-end operations using **PostgreSQL** for structured data handling and developed the front-end using **HTML** and **CSS**. This project helped bridge data analytics with actionable insights for farmers and agricultural stakeholders.

Technical Skills

Programming: Java, Python, C++

Web Development: HTML, CSS, JavaScript

Databases: MySQL, MongoDB, PostgreSQL

Courses

2023: Python Essentials on Vityarthi

2024: The Bits and Bytes of Computer Networking

2025: MongoDB Database Admin Path (Self-Managed)

Achievement

- Completed 100 Days of Code Challenge
- Solved 200+ DSA problems
